

Code Block Test

Python Example

```
def calculate_metrics(data: list[dict]) → dict:
    """Calculate key metrics from data."""
    total = sum(item["value"] for item in data)
    average = total / len(data) if data else 0

    return {
        "total": total,
        "average": average,
        "count": len(data)
    }
```

TypeScript Example

```
interface User {
  id: string;
  name: string;
  email: string;
}

async function fetchUser(id: string): Promise<User> {
  const response = await fetch(`/api/users/${id}`);
  return response.json();
}
```

Bash Example

```
# Deploy to production
npm run build && npm run test
git push origin main
```
